

Quick reference guide

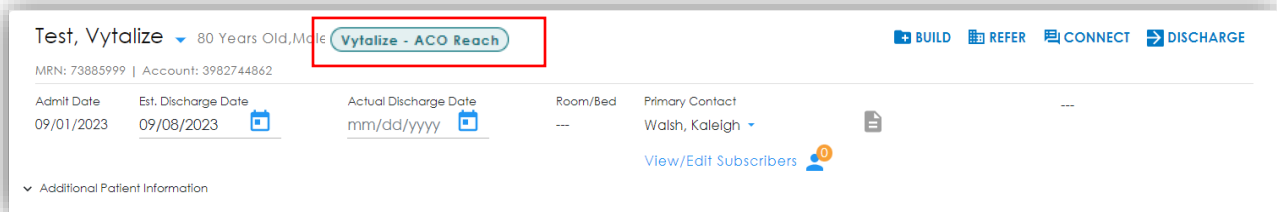

Vytalize Health

Vytalize Health, a leading provider enablement platform and Medicare Accountable Care Organization (ACO), provides a data-driven care delivery system for Medicare patients. Their multidisciplinary clinical team serves as an extension of each physician, designing customized care plans for Medicare patients that are proven to prevent and reduce hospitalizations and improve quality of life.

WellSky has partnered with Vytalize Health, bringing you a more streamlined discharge planning workflow.

CarePort Discharge workflow

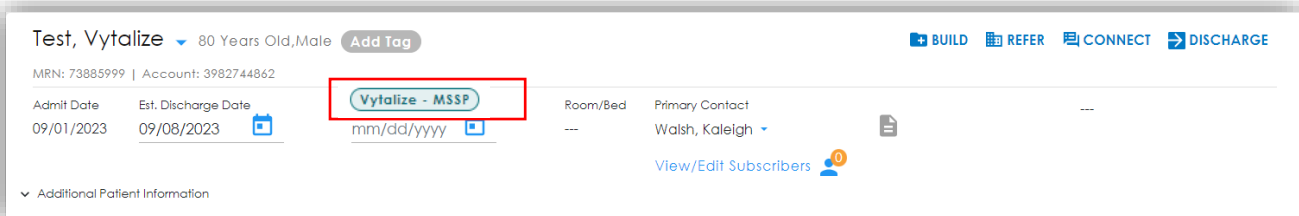

Vytalize members will be identified through CarePort attributions signifying either ACO REACH or MSSP membership.

The screenshot shows a patient record for 'Test, Vytalize' (80 Years Old, Male). The 'Vytalize - ACO Reach' tag is highlighted with a red box. The interface includes fields for MRN (73885999), Account (3982744862), Admit Date (09/01/2023), Est. Discharge Date (09/08/2023), Actual Discharge Date (mm/dd/yyyy), Room/Bed (---), and Primary Contact (Walsh, Kaleigh). Buttons for BUILD, REFER, CONNECT, and DISCHARGE are visible at the top right.

Vytalize **ACO REACH** attributed patients are eligible for *additional* benefit enhancements; SNF 3 Day Waiver and Home Health Homebound Waiver.

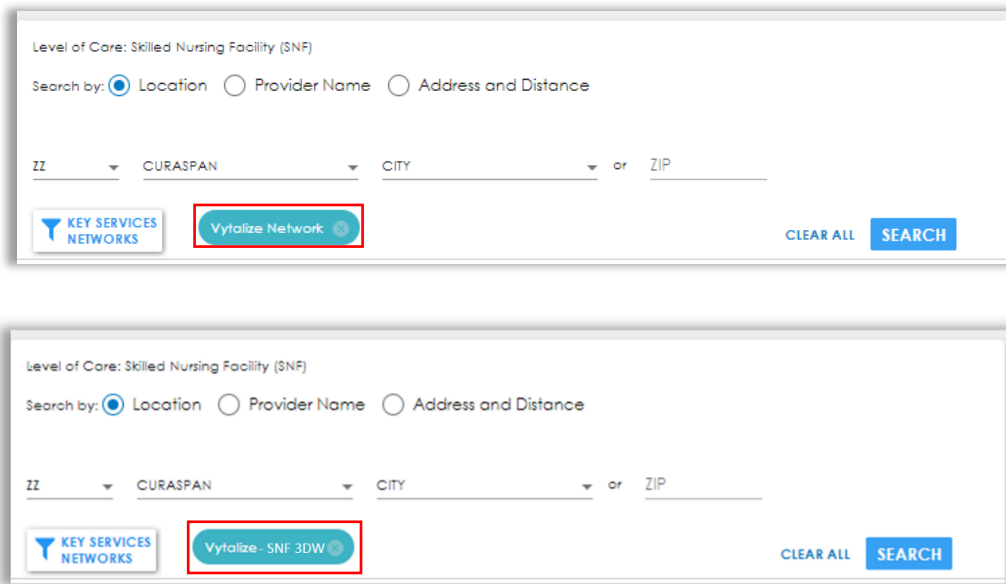

- **SNF 3 Day Waiver:** discharge patients to SNF LOC sooner utilizing the Vytalize SNF 3DW network.
- **Home Health Homebound Waiver:** provide services to patients who don't meet homebound criteria, but still require services at home.

The screenshot shows a patient record for 'Test, Vytalize' (80 Years Old, Male). The 'Vytalize - MSSP' tag is highlighted with a red box. The interface includes fields for MRN (73885999), Account (3982744862), Admit Date (09/01/2023), Est. Discharge Date (09/08/2023), Actual Discharge Date (mm/dd/yyyy), Room/Bed (---), and Primary Contact (Walsh, Kaleigh). Buttons for BUILD, REFER, CONNECT, and DISCHARGE are visible at the top right.

Vytalize **MSSP** attributed patients are *not* eligible for additional benefit enhancements.

High-quality post-acute networks will be displayed for patients specific to their location. When sending a referral for a patient with a Vytalize tag, the appropriate Vytalize network will auto-populate on the refer screen, making it easy to identify in-network providers when discussing post-acute care options with patients and families:

The image shows two screenshots of the WellSky referral screen. Both screenshots have the following elements: 'Level of Care: Skilled Nursing Facility (SNF)', 'Search by: Location (selected), Provider Name, Address and Distance', and input fields for 'ZZ', 'CURASPAN', 'CITY', 'or', and 'ZIP'. The bottom left of each screenshot has a 'KEY SERVICES NETWORKS' button. The top screenshot has a 'Vytalize Network' button highlighted with a red box. The bottom screenshot has a 'Vytalize-SNF 3DW' button highlighted with a red box. Both screenshots have 'CLEAR ALL' and 'SEARCH' buttons on the bottom right.

The **Vytalize Network** of high-quality post-acute providers will auto-populate for providers with the Vytalize- **MSSP** tag.

The **Vytalize- SNF 3DW** network of CMS approved providers who can accept the benefit enhancement will auto-populate for patients with the Vytalize- **ACO REACH** tag.

WellSky's partnership with Vytalize Health is aiding in the transition of care process by keeping the Vytalize physician network up to date with patient care events through CarePort Connect. Vytalize Health invests in network, care coordination, connected community building, and tools for provider value-based care success. Referring to post-acute providers within the Vytalize network will leverage further patient support and continuity of care.
