

# WellSky Extract for Home Health

**AI-powered support for improved medication documentation**

*Included within the WellSky Home Health solution*

**WellSky Extract for Home Health** is a new AI-powered tool – now available for use within the WellSky Home Health OASIS workflow – that brings automation to the patient medication documentation process. It can help home health clinicians complete initial assessment documentation more easily and effectively by reducing manual data entry, optimizing time with patients, and combatting clinician burnout.

On average, home health patients take 13 medications at any given time, and the average time to manually input the required information about a single medication is 1.5 minutes. This means that for the average patient, the full medication reconciliation process can take nearly 20 minutes at the start of care – valuable time that could instead be spent connecting with that patient. **In comparison, users of WellSky Extract are completing the medication reconciliation process for a single patient in an average of 6 minutes – an 80% time savings compared to the industry average.**

WellSky Extract users are experiencing an **80% time savings**.

## WellSky Extract for Home Health can help to:

Reduce active medication documentation time

Improve patient-provider connection due to the reduction in time spent on manual documentation during a visit

Improve clinician satisfaction by reducing burnout

"I love that WellSky Extract improves our efficiency without taking away from quality. Because it reduces repetitive and manual data entry, I feel that it lowers the risk of error."

**Haley Brown**, Vice President of Clinical Services,  
Concierge Home Care

WellSky Extract analyzes referral documents, hand-written medication lists, and photos of medication labels to identify patient medication data (including medication instructions) and then populates that information into the fields within the WellSky Home Health EHR.

## WellSky Extract can pull medication information from a variety of sources, including:

Referral documents  
within the EHR

Medication lists  
(both within the EHR  
and handwritten)

Medication bottle  
labels found within  
a patient's home  
(via cellphone camera)

**“WellSky Extract is a game-changer for our clinicians.** In the short time our team has been using the technology, we've already seen significant benefits – the most important being the **increase in valuable time our clinicians are spending caring for patients** instead of doing manual data entry.”

**Haley Brown**, Vice President of Clinical Services, Concierge Home Care

**WellSky Extract is part of SkySense AI**, an expanding suite of AI tools from WellSky that helps to reduce manual documentation, enhance patient-provider connection, and improve the care experience for everyone. At WellSky, our AI approach puts people first. Our AI innovations are guided by human intelligence and experience. WellSky is committed to using AI responsibly and securely, respecting the rights of our users and community with the ultimate goal of making healthcare better and more cost effective.

Save documentation time and enhance patient-provider connection with **WellSky Extract for Home Health**.
