

WellSky® SkySense AI™

# Reimagine home-based care with the power of AI

What if a clinician could hold a patient's hand — instead of a tablet — during their next visit? **Now they can.** WellSky SkySense AI is a suite of AI-powered tools that makes documentation more efficient, eases administrative burdens, and gives clinicians more face-to-face time with patients and less time behind screens.

WellSky®

# What's included in WellSky SkySense AI?

## WellSky Extract

Data extraction technology that pulls patient medication information from referral documents, medication lists, and photos of medication labels and populates it into the patient record. Clinicians can review auto-populated data and confirm it.

## WellSky Scribe

Ambient listening and transcription technology that identifies key information captured during a patient visit and populates that information into OASIS documentation. Clinicians can review auto-populated data, confirm it, and submit it to the record within minutes.

## WellSky Intelligent Language Assistant (WILA):

A conversational AI assistant that complements WellSky Scribe to guide clinicians through remaining documentation questions after the visit.

# What benefits are users seeing?

- A reduction in time spent on manual documentation and after-hours charting
- An improvement in clinician satisfaction, retention, and recruitment
- More of your staff's time spent where it matters most — on patient care

*"Using WellSky Scribe, our clinicians are reporting 15-20 minutes in time savings to complete the OASIS, a process that typically takes an hour. This means a **significant reduction in time spent documenting after-hours** and ultimately **happier clinicians**. WellSky Scribe is allowing our clinicians to **focus on patient care....not paperwork**, which is a game-changer."*

— **Leslie Spencer, RN**, Vice President of Clinical Services, Medical Services of America

WellSky SkySense AI™ solutions are **directly integrated into the WellSky platform** for a user experience that is:

- ✓ **Seamless** – Expect an all-in-one, unified workflow.
- ✓ **Synchronous** – AI-generated information instantly syncs with your WellSky EHR.
- ✓ **Smart** – It's powered by decades of WellSky data and experience.
- ✓ **Secure** – Because SkySense AI is built into your secure EHR, your data is protected by the same, robust security model.
- ✓ **Self-driven** – AI agents are available to help you prep for patient visits or complete documentation.

**Experience the power of WellSky SkySense AI™ today!**
