

WellSky® Scribe for Home Health

AI-powered ambient listening
and transcription technology
to support faster, easier
clinical documentation

*Fully integrated into the
WellSky Home Health solution
for a seamless experience*

Clinicians often have to capture an extensive amount of information during a patient's start-of-care visit. And, with multiple visits scheduled in a day, clinicians may have to complete a large portion of documentation outside of working hours, which can lead to dissatisfaction, burnout, higher rates of error, overtime pay, and trouble with clinician retention. WellSky Scribe helps to alleviate this burden by auto-populating documentation directly into WellSky Home Health, giving clinicians valuable time back.

Using AI-powered ambient listening and transcription technology, WellSky Scribe helps to capture key patient details during a visit and populates that information directly into the documentation within the EHR. WellSky Scribe streamlines administrative tasks, reduces clinician burnout, boosts overall efficiency, and allows clinicians to spend quality time with patients — transforming the home health visit experience.

What benefits are users seeing with WellSky Scribe?

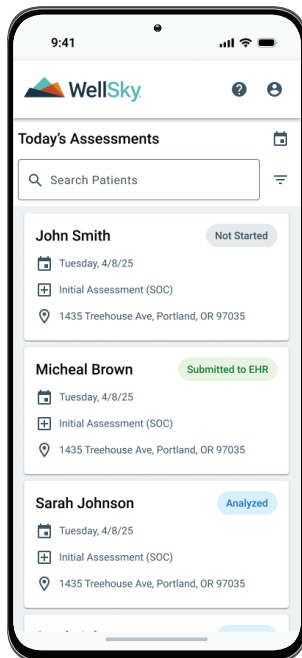

- A reduction in time spent on manual documentation and after-hours charting
- An improvement in clinician satisfaction, retention, and recruitment
- More of your staff's time spent where it matters most — **on patient care**

*"Using WellSky Scribe, our clinicians are reporting 15-20 minutes in time savings to complete the OASIS, a process that typically takes an hour. This means a **significant reduction in time spent documenting after-hours** and ultimately **happier clinicians**. WellSky Scribe is allowing our clinicians to **focus on patient care.... not paperwork**, which is a game-changer."*

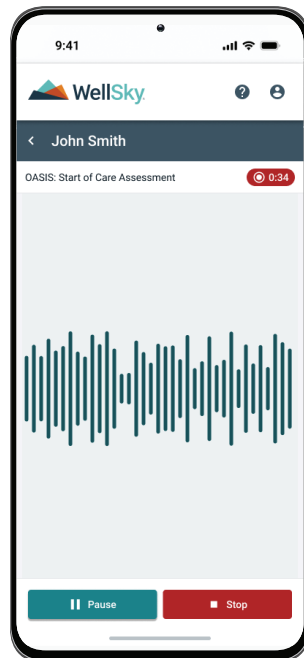

— **Leslie Spencer, RN**, Vice President of Clinical Services, Medical Services of America

WellSky Scribe is part of **WellSky SkySense AI™**, an expanding suite of AI tools that helps reduce manual documentation, enhance patient-provider connection, and improve the care experience for everyone. At WellSky, our AI approach puts people first. Our AI innovations are guided by human intelligence and experience. WellSky is committed to using AI responsibly and securely, respecting the rights of our users and community with the ultimate goal of making healthcare better and more cost effective.

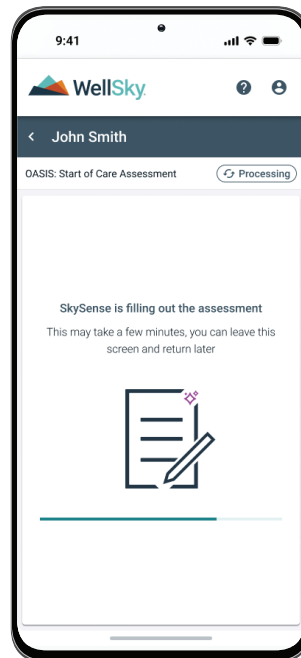

How does **WellSky Scribe** work?

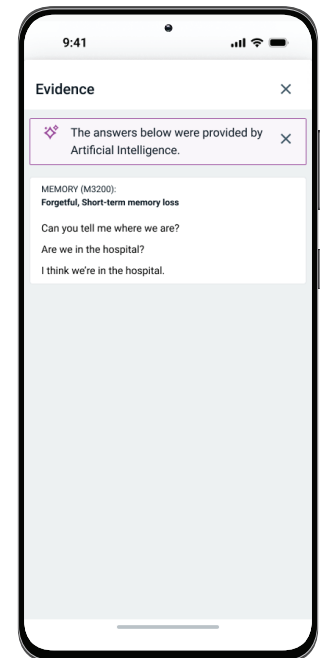

1 A clinician activates WellSky Scribe on a mobile phone or tablet and obtains patient consent to record the visit.

2 WellSky Scribe records the audio of the visit, identifying and extracting terms and information from the assessment.

3 WellSky Scribe automatically populates the applicable documentation forms and fields.

4 The clinician reviews the auto-populated data, confirms its accuracy, and submits it into the WellSky Home Health EHR in minutes.

The power of **WellSky Scribe + WILA**

Finish documentation using WILA

After the visit, **WILA** (WellSky Intelligent Language Assistant), a voice-enabled, conversational AI assistant designed to complement **WellSky Scribe**, is available to guide clinicians through any remaining documentation questions not captured during the visit.

WellSky Scribe and WILA are tools within the **WellSky SkySense AI suite**. Users of WellSky SkySense AI get access to both.

WellSky Scribe is **directly integrated into the WellSky platform** for a user experience that is:

- ✓ **Seamless** – Expect an all-in-one, unified workflow.
- ✓ **Synchronous** – AI-generated information instantly syncs with your WellSky EHR.
- ✓ **Smart** – It's powered by decades of WellSky data and experience.
- ✓ **Secure** – Because WellSky Scribe is built into your secure EHR, your data is protected by the same, robust security model.

Save time and strengthen the patient-provider connection with WellSky Scribe for Home Health.
