Build a **strong foundation**

The WellSky Long-Term Care EHR platform is built on a strong foundation of three core modules. These three modules are the central components of our solution ecosystem. This foundation is further enhanced and extended by additional modules that support specific performance areas in long term care — clinical, financial, and operational.

Core module	What it means for long-term care providers
Admit Discharge Transfer (ADT)	Centralize all resident and census information in one location.
eAssignments and messaging	Rely on a more efficient form of internal communication with individuals or groups.
eDocuments	Manage documents electronically in a single location.

"They value our opinions. They want to hear from their clients and make the software more useful for them. WellSky tells you what they're changing and why. And then we talk about it before the updates."

- Ayisha Bradley, MDS Coordinator, Care Centers
