WellSky
Scheduling

Now you can have cutting edge scheduling without the hassles of lengthy implementation approaches

Focus on your business, not your computers

With WellSky Scheduling, you have no upfront software expense or hardware investment. You don't have to add servers, software delivery apps or a costly Wide Area Network to connect multiple locations. Every time you log on, you are using the latest version of the software.

WellSky Scheduling is a native web application — it's not software "migrated" to the web — so you enjoy a seamless user experience (unlike many web apps that hiccup and sputter).

Schedule smarter

Developed by the scheduling specialists at WellSky, WellSky Scheduling leverages the same advanced scheduling logic found in the company's industry leading AppointmentsPRO scheduling software:

- Quick to learn, easy to use

- Schedule recurring, multi-resource appointments in seconds

- View and edit all of a patient's appointments on one screen

WellSky
Scheduling

See and edit your schedule from anywhere

WellSky Scheduling works with a basic Internet connection. (For best performance, a high-speed connection is required.) So it's ideal when you're on the road or away from your practice.

Work with nearly any OS or browser

You won't have to replace hardware to profit from web scheduling. WellSky Rehabiliation Scheduling is compatible with most browsers like MS Explorer, Firefox and Safari.

Connect multiple locations effortlessly

Centralize your entire practice under one scheduling system with Appointments- Everywhere. You can schedule patients or view schedules at any of your locations as if you were there yourself.
