

Boost productivity and improve scheduling and resource management

WellSky Resource Manager for Rehabilitation can improve scheduling and resource management and help your inpatient and outpatient departments work smarter

Whether you need to book complex recurring outpatient visits, initiate video-based visits, more accurately track inpatient compliance, or optimize labor management, WellSky Resource Manager for Rehabilitation provides powerful benefits that other solutions do not offer. You'll be able to:

- Monitor current and forecasted provider productivity and help reduce burnout
- Handle orders, from documentation or from major Hospital Information Systems (HIS)
- Optimize staff scheduling with easy visibility into staff capacity
- Have 24-hour staff and patient scheduling capability
- Free up clinicians to spend more time on patient care because of tools that allow your clerical team to do more of the scheduling
- Improve patient service with features that streamline appointment reminders and reduce wait times
- Increase compliance with payer authorizations, referrals, and scheduling-based requirements (like the IRF Three-Hour rule)
- Simplify scheduling across multiple lines of service and set recurring appointments
- Streamline time and attendance tracking, and export to major payroll systems

Key features for patient care

- Provider productivity monitoring
- Multi-resource visits
- Appointment reminders
- Browser-based scheduling
- Markers
- Monitor display
- Custom field labels
- Group scheduling
- Advanced reporting
- Protocol scheduling

WellSky Resource Manager for Rehabilitation vs. other major EHR solutions

Featured benefits	WellSky Resource Manager for Rehabilitation	Other EHR Solutions
Scheduling	Improves scheduling efficiencies by supporting and assisting with multi-resource appointments and multi-booking, as well as multiple visit types such as video-based telehealth.	Does not support multi-resource appointments.
	Tracks each patient's attendance and authorization individually, whether they are attending as part of a group or as an individual.	Limited group scheduling capabilities.
	Finds available resources with ease by "pinning" patients and/or resources to the scheduling grid, allowing you to find all available resources for that patient at the desired time.	Difficult to find available resources for patients.
	Quickly registers new patients with minimum data for a first visit.	New patients who need immediate care can only be scheduled after they are fully entered in Epic.
	Provides a complete, real-time view of a patient's schedule and activity.	Limited visibility of the patient's schedule including any last-minute changes.
	Provides multiple schedule views — by day, week, month, even years into the future — to maximize the efficiency for your patients and providers.	Limited view of future appointments (14 days only).
	Robust appointment reminders (text, email, phone) and the ability to receive video-based care.	Limited appointment reminders.
Customization	Customizable appointment grid that includes any combination of details of resources and patients on a "flex tab" so you do not have to change your pre-defined views.	No way to customize views to schedule a team of resources.
	Uses a broad palette of colors to automatically code your appointments by type.	Limited ability to distinguish appointments on the grid.
	Customizable patient arrival alerts, including sound, visual indicator, or text message. WellSky Rehabilitation will notify providers when a patient arrives.	Practitioners don't know when a patient arrives.
	Customizable labels for many fields to reflect the terminology your team uses every day.	Offers generic or hospital-wide labels.
	Marks appointments, patients, and providers with colored dots that can indicate anything from a latex allergy to a bariatric patient that will need an aide.	No way to highlight visits with special needs.
	Sets unique time slot lengths for each provider on your schedule grid.	It is difficult to customize time slot lengths for various resources on the grid.
	Improves patient experience by customizing patient communication with specific, detailed instructions regarding upcoming appointments (e.g., "Don't forget to bring a bathing suit for aqua therapy next week.").	Appointment reminder letters are limited to date/time of the visit.
	Reduces cancellations and no-shows by automatically sending patients email or text message reminders. Patients can confirm the appointment via text conversation.	Text reminders are difficult to set up and have limited interactive capabilities.

Featured benefits	WellSky Resource Manager for Rehabilitation	Other EMR Solutions
Accuracy	Books complex, multi-step protocols by defining all the steps, resources and other requirements as well as scheduling the entire regimen in one command.	No way to book a complex, multi-step procedure.
	Reduces scheduling errors by cutting, copying, and pasting details of a recurring appointment.	No ability to cut, copy, or paste appointment data.
	Breaks down a procedure into phases, and tracks which phase the appointment is in. For example, a single procedure may include separate phases for intake, prep, exam, and redress. You can see exactly what phase the appointment is in.	No specificity regarding the phase of an appointment with multiple steps.
	Saves time by indicating exactly where an appointment is taking place (e.g., "Third-floor gym").	Limited specificity regarding appointment location.
Efficiency	Hover over any appointment to see details, such as provider and procedure, without having to drill into the appointment.	No visibility of appointment details on the scheduling grid.
	Browser-based scheduling lets you open multiple tabs of the scheduling grid and dialogue windows to schedule across disciplines, departments, or locations with ease.	You can't see multiple views of the schedule at one time.
	Print a schedule by day, month or week.	Limited schedule printing.
	Tracks authorizations based on days, treatments, money, or visits. It also handles cap tracking.	Cannot track insurance authorizations based on days, treatments, or money remaining — can only track based on visits.
Compliance	Tracks time requirements and resource productivity in a dashboard on the scheduling grid.	No easy way to track required hours of treatment per day or week (such as the IRF Three-Hour rule).
	Displays a real-time view of your facility while meeting HIPAA requirements with support for electric monitors.	Little or no support for public monitor displays of the schedule.

About WellSky

WellSky is a technology company advancing human wellness worldwide. Our software and professional services address the continuum of health and social care — helping businesses, organizations, and communities solve tough challenges, improve collaboration for growth, and achieve better outcomes through predictive insights. People who choose a life of caring — and the organizations and communities they serve — deserve a special kind of support. So we help them to care smarter. Liberating them to focus on the people they serve. Providing solutions that make work flow, integrate insights, and update effortlessly. So they're able to anticipate — and exponentially increase — the impact of care. Informed by more than 30 years of providing software and expertise, our purpose is to empower care heroes with technology for good, so that together, we can realize care's potential and maintain a healthy, flourishing world.
